SUMMARY

- UC Berkeley Statistics and Applied Mathematics graduate with Financial Accounting and Forecasting coursework, seeking a strategic finance and corporate FP&A role. Experience in financial modeling, variance analysis, KPI tracking, and building clear reports and presentations for leadership, with hands-on fluency in AI tools and workflows.

EDUCATION

University of California, Berkeley

Aug 2023 - Aug 2025

B.A. Statistics (Business Emphasis) & B.A. Applied Mathematics (Data Science Emphasis)

Berkeley, CA

- Relevant Coursework:** Business Analytics, Financial Accounting, Principles & Techniques of Data Science, Forecasting, Linear Modeling, Concepts in Computing with Data, and Modern Statistical Prediction & Machine Learning.

EXPERIENCE

Crestline Risk-Transfer Deal Analysis

Jul 2026 - Aug 2026

Financial Analysis Project (*Interactive Dashboard*)

Fremont, CA

- Evaluated a proposed \$1.0M quota-share reinsurance deal (50% cession, 32.5% ceding commission) by rebuilding six years of loss ratios from a 4,577-row policy bordereaux and loss run, deriving a 59% break-even loss ratio to frame the decision.
- Identified data-quality failures using accounting identity checks (written = earned + unearned), uncovering 15 erroneous policy rows, formulaic patterns, and missing IBNR; found that an AI-generated memo understated two loss years by 10-21 percentage points.
- Built an expected loss ratio model (68%, sensitivity band 65-72%) incorporating cost-trend drift and a Poisson-based catastrophe load, then presented findings and defended the methodology to senior reinsurance professionals, recommending restructured terms.

BASIS Independent

Aug 2025 - Present

Mathematics Instructor

Fremont, CA

- Earned excellent performance reviews for communication and results while translating complex technical concepts into clear, digestible explanations, helping more than 83% of students exceed standards on BASIS network comprehensive exams.
- Built LLM-assisted learning workflows using ChatGPT and Claude to generate practice materials, standardize feedback, and personalize instruction, improving student engagement by 20%+ across two semesters.
- Developed three advanced mathematics courses from scratch for 100+ students, creating scalable curricula, rigorous assessments, and feedback workflows while coordinating with parents and school leadership to improve student outcomes.

BLCK UNICRN

Jan 2025 - May 2025

AI & Financial Analyst Intern

Berkeley, CA

- Analyzed customer and engagement metrics (conversion rate, average session duration) to identify and quantify growth drivers, support product decisions, and improve targeting strategies across 50+ accounts and 120+ contacts.
- Built multi-source data pipeline across 20+ inputs to consolidate and validate actuals, then performed monthly budget vs-actual variance analysis on KPIs against plan to explain key drivers, reducing manual reporting time by 2 hours/week.
- Designed, iterated, and evaluated LLM prompts (GPT-4o) to improve output quality and accuracy, enabling reliable automated responses for a custom-built chatbot and marketing workflows.
- Authored a Business Requirements Document and workflow documentation to align cross-functional stakeholders on planning, monitoring, and decision-making, ensuring outputs were accurate, timely, and clear for leadership review.

Beats by Dre

Jun 2024 - Aug 2024

Data & Consumer Insights Analyst Intern

Fremont, CA

- Analyzed 500+ customer reviews using natural language processing techniques in Python to identify patterns, pain points, product-quality concerns, and risk signals influencing purchasing behavior.
- Cleaned, tokenized, and validated large-scale unstructured review data, ensuring quality and consistency that enabled 10+ distinct visualizations informing tailored marketing campaigns and communication strategy.
- Identified actionable insights on consumer priorities, including sound quality, design, and price sensitivity, contributing to a 15% improvement in targeted marketing by refining campaign messaging and audience alignment.

SKILLS

- Finance & Business Tools:** Microsoft Office, Google Workspace, Power BI; Excel formulas, PivotTables, lookups, conditional formatting.
- Financial Analysis:** Budget vs. Actual Analysis, KPI Reporting, Forecasting, Financial Modeling, Sensitivity Analysis.
- Programming:** Intermediate: Python, SQL, R, LaTeX; Basic: Java, C++, MATLAB.
- AI & Data Tools:** LLMs & Prompt Engineering (ChatGPT, Claude, Gemini), Git, CSV-based data workflows.
- Statistical Methods:** Hypothesis Testing, Linear & Generalized Linear Models, ANOVA/ANCOVA, Maximum Likelihood Estimation, Bootstrap Methods, Model Selection & Diagnostics, Quality Improvement.
- Additional:** U.S. Citizen; Project Management, Quality Control, Detail-Oriented, Written & Oral Communication, Quick Learner, Adaptable.
